# A very long title of my beamer-esque presentation

Author's name
University of XYZ
2022-26-03

(Only normal text is centered now)

#### A normal slide

## H1 again

**H2** 

**H3** 

bullet quote

code

text

### Title page ad hoc fix

 If the title of your presentation is too long and the border intersects with the text underneath, use the following

```
# Title
<br />
<br />
<!-- empty line here --->
Author's name University of XYZ ...
```

make sure to leave an empty line below the <br/>tag

## Tinytext class

- use <!-- \_class: tinytext --> to make some text tiny
- might be useful for References
